

Hot stuff in the most romantic city on earth...

250,000 cph MJ7500 system on show

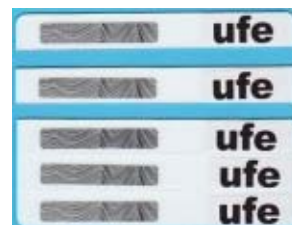

This year at Cartes, Datacard Ga-Vehren will be unveiling the new hot foil module for the CPST MJ7500 system! The MJ card personalisation line on stand 3D043 will also feature a label applicator as well as UV DOD and MEK print heads to demonstrate flexibility and short changeovers.

Hot foil scratch off panels allow for a more secure and efficiently-produced card. Hot foil fuses itself with the plastic card, making it impossible to remove the label without destroying the card. Some customers prefer hot foil for secure applications.

We will be running three formats during the show. The first will be a 5-in-1 foiling format. 5 hot foil stamps will be applied over MEK-based ink on a paper card.

The second 5-in-1 format will use scratch off labels. We will UV DOD print onto 500 micron plastic cards, cure the ink and then apply 5-in-1 scratch off labels.

A regular CR80 card format will also be demonstrated with our proven UVDOD inkjet system, lo-co encoding and standard scratch off labels.

More information on our Website

We have posted the machine configuration and full explanation of the processes involved on our website.

www.uniquefinishing.co.uk/newsletters/hot.html

We have also now added videos and photos of all machines and common applications, please check back soon for even more.

Cartes, November 13-15 2007

Cartes will be at the Paris-Nord Villepinte exhibition centre again, one metro stop away from Charles de Gaulle airport. You can find more information and a full exhibitor list at cartes.com

Admission is free in advance by registering on the website above (click on the "ask for your free visitor badge now" button on the left side of the Cartes main page), or €30 on the door. Hope to see you there.

Kind regards,
Lindsay.
