

## New Unwind & Labeller Combo debuts in Orlando

### 50,000 cph system set to revolutionise card labelling

Watch the video! Click [here](#).

CTST in Orlando last month saw the official launch of Web Technology's Mini-Labeller and Unwind unit. It was one of the few highlights of an otherwise quiet show with only a handful of European visitors. CTST seems to have got smaller over the last few years and I'm not sure I would go again. Cartes is obviously **the** undisputed card show.

Web Technology's new Mini-Labeller delivers the highest dispense speeds in the industry and, with advanced web tension controls, provides consistent and accurate label placement. Separating the unwind hardware from the labelling head means that all of the motor vibration and label weight is kept away from the label application point, greatly increasing accuracy at higher speeds. The labeller has a very compact footprint, allowing it to be mounted in small spaces whilst still providing easy operator access. It's built for high speed and high volume; like other North American machines, it's designed to last.

The Labeller and Unwind units can be supplied as a "combo". The Unwind can be provided as a standalone unit to complement existing labelling heads. It can be placed at any angle to a labeller and will run from some distance away if space around the machine is tight.

Brochures for the unwind unit and the mini-labeller can also be viewed and downloaded.

---

### Demo unwind unit on its way to the UK

We will be installing an unwind unit in the UK later this month. It will be trialled as a secondary unwind to an existing Sessions of York labelling system, cutting down changeover times between label rolls from 5 minutes to under 1 minute on large, piggy-back style labels for direct marketing. It will then be installed as part of a combo unit onto an AZ system feeding small scratch off labels.

If you would like any further information or have any questions, please give me a call.

Kind regards,  
Lindsay.
