

Smart, small & safe - Manual Inspection Sorting System - MISS

The solution for 100% data security for manual document processing

The **MISS** is a work station for manual, data secure processing of high security documents like credit cards, drivers' licenses, ID cards and passports. The system was specially designed for the dispatch of documents of small jobs or document volumes but also for the post processing in connection with automatic mailing machines.

This modular, manual system enables a 100% control of all dispatch jobs and is employed where ever data security and quality classification is necessary.

This system offers all advantages of an automatic dispatch system with the flexibility of a manual work place.

Highest security requirements in the sector of document dispatch are fulfilled with the result: fully secure through automated printing- and reading technology, data based processing and easiest operation through graphical user interface. Each product can either be printed and / or verified which guarantees correct classification of cards and passports with carriers, personalized envelopes, delivery notes, invoices and dispatch labels. Mistakes in classification are now part of the past. Each mailing is recorded and filed through connection to a superior data system.

Also so-called „rejects“ or incorrect mailings which were rejected on automatic packaging systems can be post-processed with the **MISS**. This guarantees a 100% data control and a comprehensive audit since each mailing is recorded separately.

Another special feature of the system is also the compactness: it is completely modular upgradable and can be equipped with different reading- and printing systems but also with packaging modules. **MISS** – the perfect system for all daily dispatch jobs.

Basic equipment:

- Performance Desktop PC with customer network connection
- Flat screen 22 inches
- Height adjustable and turnable screen fixture
- Black-and white- or colour laser printer for printing of reports and delivery notes
- Label printer for address labels
- Ergonomic, height adjustable work place
- Dialok Control Center GUI
- Dialok Data Center SQL database

Additional features:

Reading devices:

- 3-lane magnetic card reader
- Manual scanner for 1D and 2D barcode
- Passport scanner for identification of MRZ-numbers in Passports (optional)
- Chipcard reader (also contactless)
- Video camera for facial-, signature- and finger print verification

Printing systems:

- Label printer system for labels with thermo direct- or thermo transfer procedures
- Additional systems:
- Label applicator for double-sided labels
- Banderole unit
- Scale for determination of weight with databased driven selective weight determination
- Folding- and inserting system
